~~METHOD FOR THE INDUCIBLE EXPRESSION OF RNAi IN CELLS,
THE NUCLEIC ACID MOLECULES FOR ITS IMPLEMENTATION
AND THE CELLS TRANSFORMED BY THESE MOLECULES~~

Abstract

~~To present invention relates to a~~A method of expressing RNAi in cells ~~comprising:~~ (i) ~~The introduction including introducing~~ into cells ~~of a molecule of nucleic acid comprising including~~ the sequence sense and antisense of RNAi placed under the control of a promoter of single transcription, which sense and antisense sequences are separated by a sequence of DNA ~~comprising including~~ a sequence for the stop of this transcription, which DNA sequence is framed at each of its ends by a lox site, and (ii) ~~The placing Cre in contact of the lox sites with Cre in order to obtain by site-specific recombination the elimination of the DNA sequence and of the stop sequence of the transcription in such a manner that that these~~the sense and antisense sequences are no longer separated except by the remaining lox sequence and, thus, permit ~~the~~ transcription of the RNAi in its entirety with the residual lox sequence as a loop.
